

Unified Test Case Suite

Problem Statement

- Redundant test cases maintained across platforms and brands
- Repeated test flows / steps across test cases
- Maintenance of the tests – To avoid a risk of duplicate tests with a difference of 1 or more steps within a test and avoiding an additional newer test

Solution Approach

Benefits

- **30%** Test Reduction by Optimization on Flows and Validation
- **60%** Execution Reduction by efficient distribution across brands and platforms
- Test suite optimization by transitioning Progression/Feature tests into Regression tests
