CREDENZA

Test Account Management

DEC 2025

Paramount

The Problem We're Solving

❌ Before Credenza

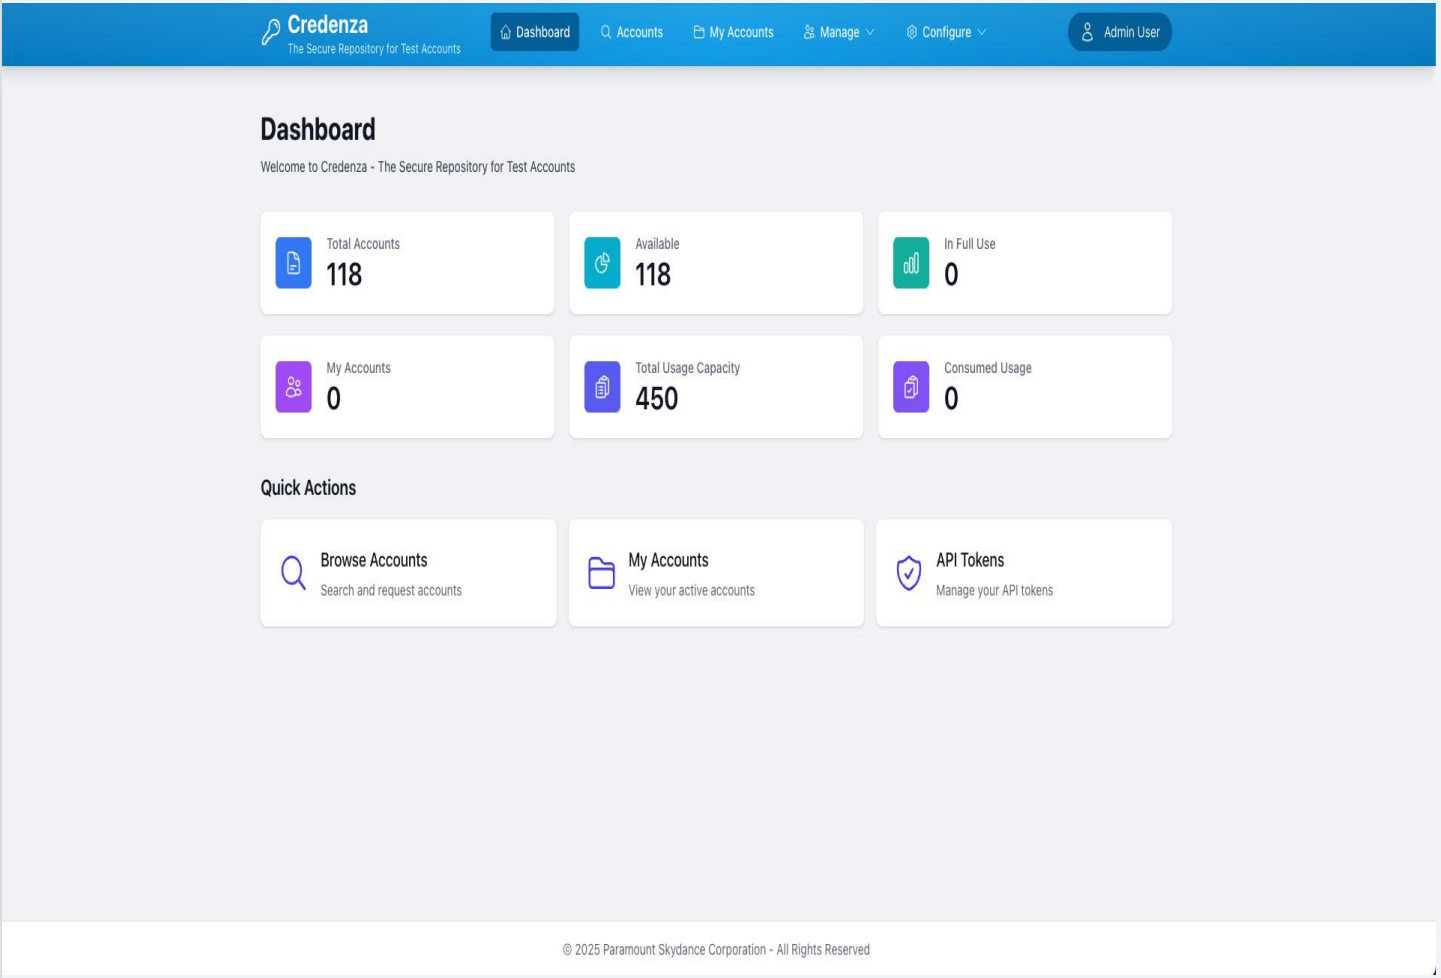

- → Hard-coded credentials scattered across repos
- → No visibility into who's using which accounts
- → Account conflicts causing test failures
- → Manual coordination via Slack & spreadsheets
- → No audit trail to track usage or issues
- → Time wasted searching for available accounts

✓ With Credenza

- → Centralized account management
- → Account usage assignment & coordination
- → Usage control, tracking & reporting
- → Dynamic allocation for any criteria
- → API integration with test suites
- → No more PRs for account maintenance

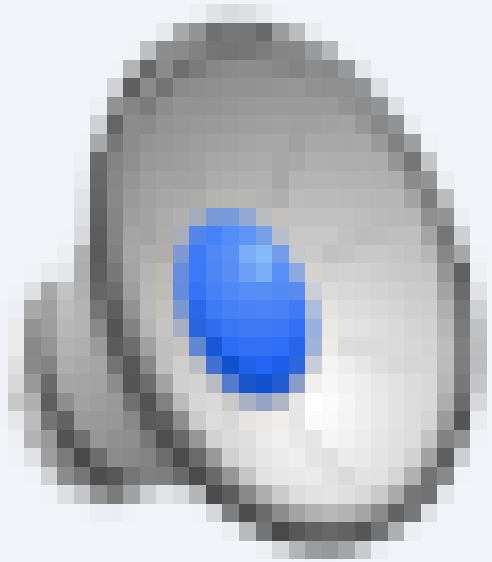

Estimated time savings: 30-60 minutes per tester per day

Introduction

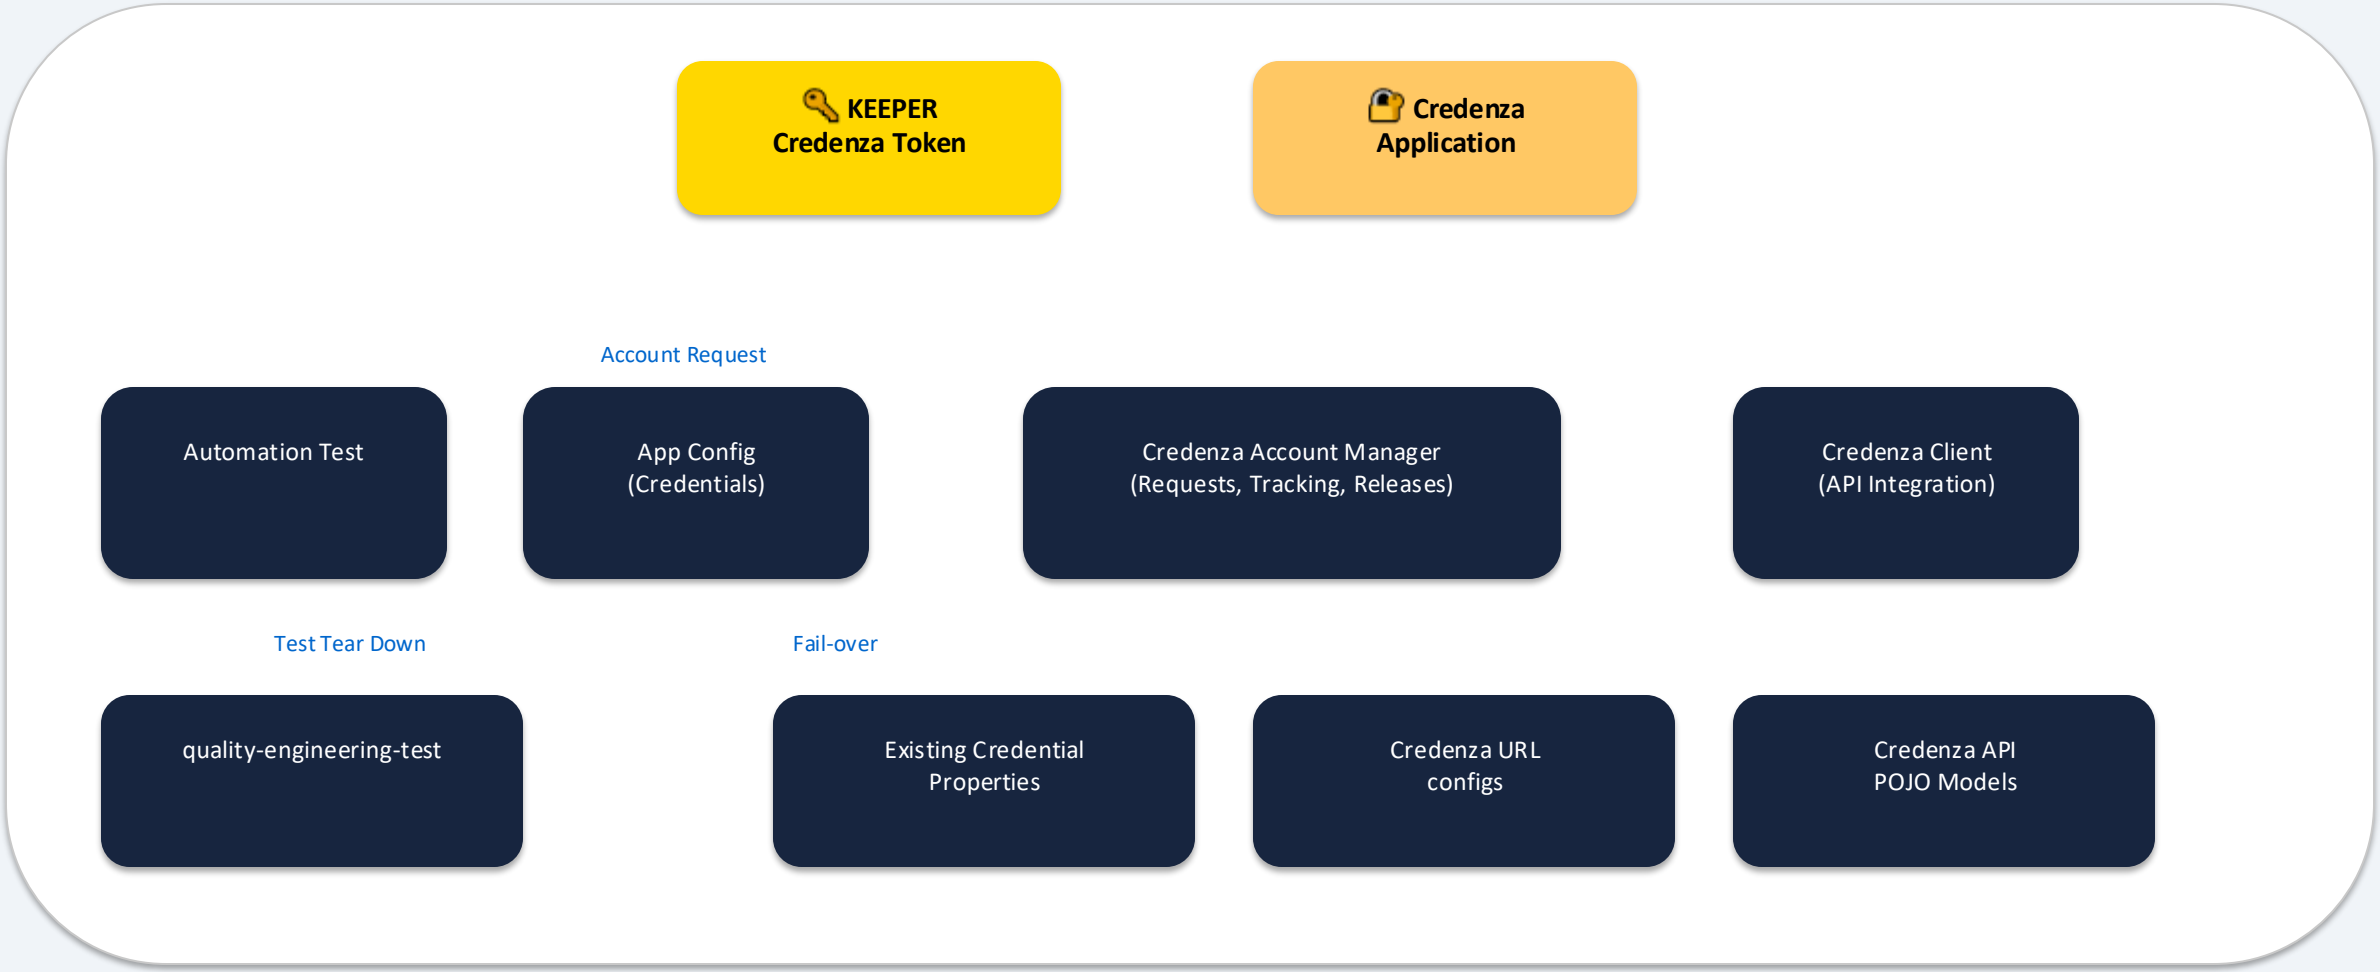

- Centralized account management
- Account Usage Assignment to User & Better Coordination
- Usage Control, tracking & Reporting
- Dynamic allocation & multiple account setup for a given criteria
- API Integration with test suite
- No more PRs for Test Account Maintenance

Automation Integration

https://github.com/paramount-streaming/quality-engineering-test/compare/credenza-poc

Administration Features

- User management, and force release of accounts
- Region, Environment, Platform, and Application management
- Account Usage and Request Error details
- Audit Trail details for detailed analysis
- Database browser
- Full API documentation access

Enhancements

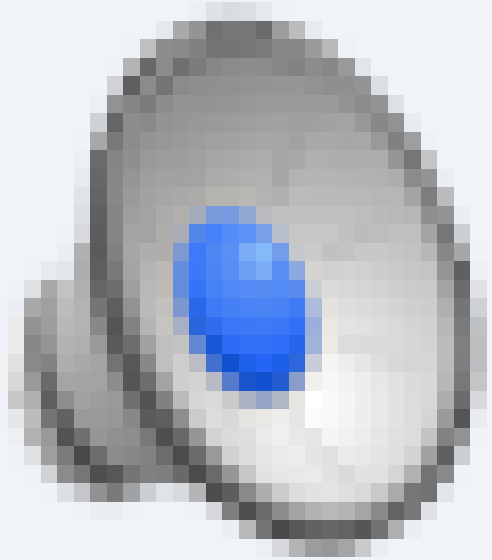

API

Application User Management API Integration

- Account Criteria definitions and support in requests
- Automatic account provisioning for Staging
- Regular Health checks on account
- Auto healing of account issues
- Flagging & Reporting of accounts that could not be healed

What's Next

❓ Feedback & Clarification

- Production account creation workflow
- TVE accounts management approach
- Other specific case scenarios
- Edge cases & special requirements

⚙️ Environment Decisions

- Web server placement
- Database hosting decision
- Okta integration for SSO
- Keeper integration for secrets

🚀 Rollout Plan

- Schedule beta testing phase
- Pilot with select QA teams
- Gather feedback & iterate
- Full deployment for all QA engineers

Feedback Collection → Environment Setup → Beta Testing → Production Deployment

THANK YOU
